SOP-COM-001 · New to GitHub: your first hour

SOP COM-001 | Status draft | Changed 2026-11-01 | For Every newcomer

Department: COM · **ID:** 001 · **Status:** draft (approved when tagged) · **Owner:** the lab (Chris W, the steward) · **Last changed:** 2026-11-01

Purpose

A person who has never used GitHub can, within one hour, have their own account, be inside the organisation, know five words, read the reading room in a browser, and bring an AI helper if they want one. Nothing in this hour asks them to type a command.

Scope

Anyone new to Taylor'd Wraps' GitHub home (`github.com/taylordwraps`): the shop's own seat, anyone the shop names as a reader, and the helpers who read beside them. It ends where SOP-IT-002 (helper access in depth) and SOP-GOV-002 (how collaboration works) begin.

> ***Note. At Taylor'd Wraps this hour is optional, always.*** *The websites, the slides and the PDFs need no account at all (SOP-IT-002, read with no account), and asking for a change is still one message to Kenney (SOP-OPS-001). This page is here for the day the shop wants its own key to its own GitHub home: the seat is an owner's, kept ready, so the shop never depends on one other person to open it.*

Roles

Role	Does
Newcomer	creates their own account, types their own password, accepts, reads
Steward (Chris W, through Kenney)	sends the invitation and the links, answers questions, never asks for a password
Helper (optional)	reads alongside the newcomer, explains, never receives a password or a code

The hour at a glance

Prerequisites

An email address you read, a phone (for two-factor sign-in), a browser. The steward has your email address or will send you a link once you have an account.

Steps

1 · Your account (about 10 minutes)

1. Go to `https://github.com/signup` and enter **your own** email address. *You should see:* a page asking for a password.
2. **Type your own password.** Nobody else types it, sees it or keeps it: not a steward, not a friend, not an AI helper. A password manager may suggest one. *You should see:* a username field.

3. Choose a username. It is public and lasts; your first name and something you like works. *You should see:* GitHub's puzzle or email code.
4. Confirm the code from your email, choose the **Free** plan. *You should see:* your empty dashboard, your picture (a pattern for now) top right.
5. Send your **username** (never the password) to the steward where you already talk: for the shop, that is Kenney or Chris.

> ***Important.*** *If anyone, a person or a helper, ever asks for your password or a sign-in code, the answer is no. A steward never needs them: invitations go to your username.*

2 · Two-factor sign-in (about 10 minutes)

1. Picture (top right) → **Settings** → **Password and authentication** → **Enable two-factor authentication**. *You should see:* a QR code.
2. Scan it with an authenticator app (or use a passkey or SMS, if offered), type the six digits. *You should see:* a list of **recovery codes**.
3. **Download the recovery codes and keep them where you keep important papers.** They are the only way back in if the phone is lost. Never paste them anywhere. *You should see:* "Two-factor authentication is enabled".

Organisations in this fleet require two-factor sign-in; the invitation waits until it is on.

3 · Accept the invitation (2 minutes)

1. Open the email titled *"… invited you to join the … organization"*, or the bell icon on GitHub. *You should see:* a green **Join** button.
2. Click **Join**. *You should see:* the organisation's page; its name under your profile's **Organizations**.
3. If you were also added to a team (for example **readers**), GitHub may ask you to accept that too. The shop's own seat is an **owner's**, so it needs no team: owners read everything in the organisation.

4 · Five words (5 minutes)

Word	Means	Where you see it
Repository	a folder that remembers every change and who made it	every link that looks like `github.com/taylordwraps/<name>`
Branch	one line of that history; `main` is the live copy, `preview` the rehearsal	the branch picker above the file list
Pull request	a change asking to move from one branch to another, with a place to comment	the **Pull requests** tab
Issue	a conversation thread: the easiest way to ask or answer	the **Issues** tab
Merge	accepting a pull request, so the change lands; a person with the role does it	the green button at the foot of a pull request

That is all the vocabulary this hour needs. SOP-GOV-002 has the rest when you want it.

5 · Read the room in your browser (15 minutes)

1. Open the reading room link the steward sent (`https://github.com/taylordwraps/reading-room`) while signed in. *You should see:* its README, an index of what to read first.
2. Click **000 Start here** (or the first link in the index). *You should see:* a page with a TL;DR at the top.
3. For a printable copy, open the `pdf/` folder beside it and click the PDF. *You should see:* the same page as a document.
4. **A 404 means "no permission yet"**, not "broken": check you are signed in as the account you sent the steward, and tell them the link.
5. Visitors (and you, signed out) can see the public room: `https://taylordwraps.github.io/reading-room-public/` .

6 · Bring a helper (optional, 10 minutes)

1. Choose a helper you already use (Claude, ChatGPT, Codex, Littlebird, any of them).
2. Ask it to **read with you, not for you**: paste the page's text, or give it the link if it is already connected to GitHub with your permission.
3. A good first question: *"Read 000 Start here and tell me, in five lines, what is waiting for my answer."*
4. **Never give a helper your password, a sign-in code or a recovery code.** If it needs its own access to private pages, follow SOP-IT-002 (a read-only key in your own account, or an approved connection).

7 · The welcome deck as slides (5 minutes)

1. Open the organisation's public profile: `https://github.com/taylordwraps` . *You should see:* a banner and a **Welcome deck** link.
2. Click it. The deck is in `.github/decks/` as a PDF (slides you page through), an HTML page and the markdown it was made from. *You should see:* the first slide, *Welcome to ….*
3. Page through it once. It walks the same road as this hour and points at the real pages.

Verification

The newcomer: has two-factor sign-in on; sees the organisation under **Organizations**; opened the reading room's README and one PDF from their own account; can say the five words in their own words. The steward: sees them as a member (and in the readers team) on the organisation's **People** page.

Troubleshooting

Symptom	Likely cause	What to do
No invitation email	sent to another address, or two-factor not yet on	check the bell icon on GitHub; turn on two-factor; ask the steward to resend to your username
The reading room shows 404	signed out, signed in as another account, or the team not yet accepted	sign in; accept the team; tell the steward the link and your username
"Your organization requires two-factor authentication"	step 2 not done	do step 2, then accept again
Lost phone	the authenticator is gone	sign in with a recovery code, then set up two-factor again
A helper asks for your password	it should not	say no; follow step 6 or SOP-IT-002
