Start here

How this folder reads, how to answer if you ever want to, and how to bring your helper along

Read this one once. Every other proposal assumes you have.

Proposal 000 | Status evergreen | Updated 2026-11-01 | For The shop and its helpers

TL;DR

Tip. Five lines, if that's all you read.

1. ***A proposal is one folder with one page.*** *The five-line TL;DR comes first, the detail folds away underneath, and the same page is a* ***PDF*** *in* `pdf/` *for anyone who would rather not open GitHub.*
2. ***Nothing here is an ask.*** *Everything written for Taylor'd Wraps is offered. "Not now" is a complete answer, and so is silence: nothing changes until the shop says so.*
3. ***Bring your helper.*** *If you use ChatGPT, Claude or another assistant, it can read these pages with you, never more than you can (below, and proposal 001).*
4. ***The markdown travels with the PDF.*** *When a proposal is sent as a PDF, the* `.md` *goes with it, so a helper reads the words, not a picture of a page.*
5. ***Nothing is published by a proposal.*** *A proposal offers; the shop decides. The shop's store, its accounts and its prices are never touched from here.*

How a proposal is shaped

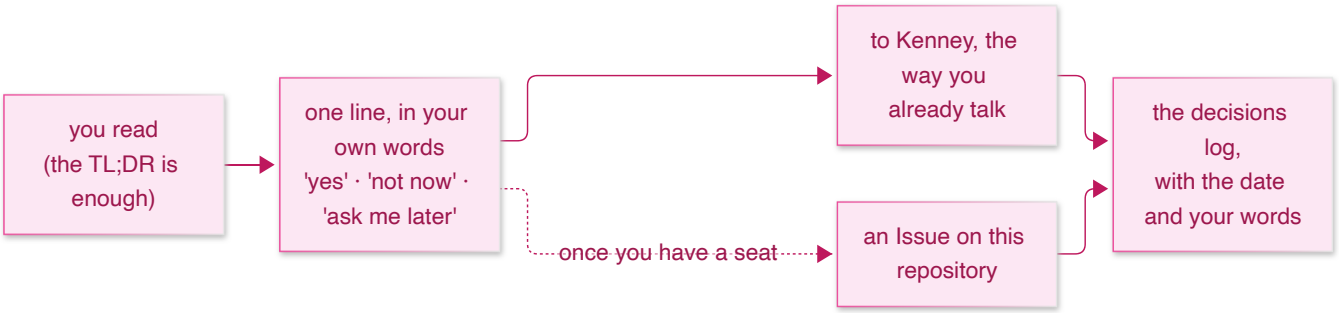

Part	What it is for
TL;DR	five lines or fewer; if you read nothing else, read these
What's offered	the idea in plain words: how things are today, beside what is offered
Itinerary	the stops, each lighting up as it is done
Questions	usually none; when there is one, it says who could answer it and that "not now" is fine
Decisions log	what was chosen, when, and by whom; blank until the shop chooses
Details	the technical material, folded into sections you can open or ignore
Sources	where each fact came from, with the date it was read

The icons beside each idea are a reading aid, not decoration: the same icon means the same thing on every page.

Status words

offered: written, waiting on nothing but the shop's interest · **proposed**: written, a choice is open · **in progress**: agreed and under way · **done** · **idea**: not yet shared with anyone

How to answer, if you want to

1. **Read the TL;DR.** If it is enough, answer from it, or don't answer at all.
2. **One line each**, in any order, in your own words: *"001 yes, later · the van in blue"*.
3. **Send it the way you already talk:** to Kenney, or to Chris once you have met. Once the shop has its own seat here, an Issue on this repository works too.
4. **Then the proposal changes, not before.** Your answer goes into its decisions log with the date.

Bring your helper (three steps)

> ***Important. Your AI helper can read these pages with you.*** *Any assistant that can read a PDF or connect to GitHub (ChatGPT, Claude, and others) can summarise a proposal, explain a word, and help you answer in your own words.*
>
> 1. ***Give it the page.*** *The simplest way: hand it the PDF and the* `.md` *beside it. Once the shop has its seat, a helper can also be connected to GitHub with read-only access to the reading room (SOP-IT-002, and proposal 001).*
> 2. ***Paste a first message:*** *"Read Start here, then tell me in five lines what is in this folder and whether anything is waiting on me. Don't change anything."*
> 3. ***Ask in your own words.*** *A helper never needs a password, a sign-in code or a store login, and never gets one.*

The markdown beside the PDF

Every proposal exists twice: the `README.md` you are reading, and `pdf/NNN-name.pdf`, rendered from it. The PDF is for eyes; the markdown is for helpers. A helper given only a PDF has to rebuild the words from a picture of a page, and loses the links and the exact phrasing. So whenever a proposal is sent on, **both files go**. The full note: Markdown beside the PDF.

Five GitHub words, and no more

Word	Plain meaning
Repository	a folder with a memory: every change to every file, with who made it and when
Branch	one line of that history; `main` is the copy everyone treats as real
Pull request	*"please look at this change and, if you agree, make it the real one"*; a person says yes
Issue	a numbered conversation attached to a repository; the simplest way to ask or answer
Merge	accepting a pull request, so the change lands; a person does it, never a helper

That is all a reader needs. SOP-COM-001 is the first hour on GitHub, whenever it is wanted.

Where things live

	Place	What it holds

	this repository (`taylordwraps/proposals`, private)	every proposal written for the shop, numbered, with the index on its front page
	`taylordwraps/reading-room` (private)	a copy of these proposals and the procedures, each a page and a PDF: the one place to read everything
	`taylordwraps/ops-standard-operating-procedures` (private)	the procedures: how a change travels, what the shop never needs to do
	github.com/taylordwraps (public)	the shop's profile and its welcome deck
	THE CARPORT and THE CAR SHOW (public)	the two websites built as a gift; no sign-in, ever
	`ONBOARDING.md` (public)	the welcome for people and helpers: who is who, what is private, how the work is done

A private link shows a 404 to anyone not signed in with a seat; that means "not yet", not "broken".
